Trusted since 2015

Our Solution

ANPR that's more than just a camera.

01

How does it work?

Vehicle arrives, number plate is scanned, the system checks if it's approved and the gate opens.

02

Adding number plates

Login to the management console on-site or remotely to manage all number plates.

03

Access restrictions

Apply access individually or group number plates together. Restrict by weekdays, one-off dates or credits.

04

Access recording

View a photo and video clip of every entry, including both successful and rejected access attempts.

05

Access event logging

Review a table of access events by who, when, and how. Export to CSV and PDF for auditing.

06

Entry and exit

Support for multiple cameras allowing for entering the site and also leaving.

07

Booking system API

The digiGate team can work with you to link your booking system with ANPR for totally automatic site access.

08

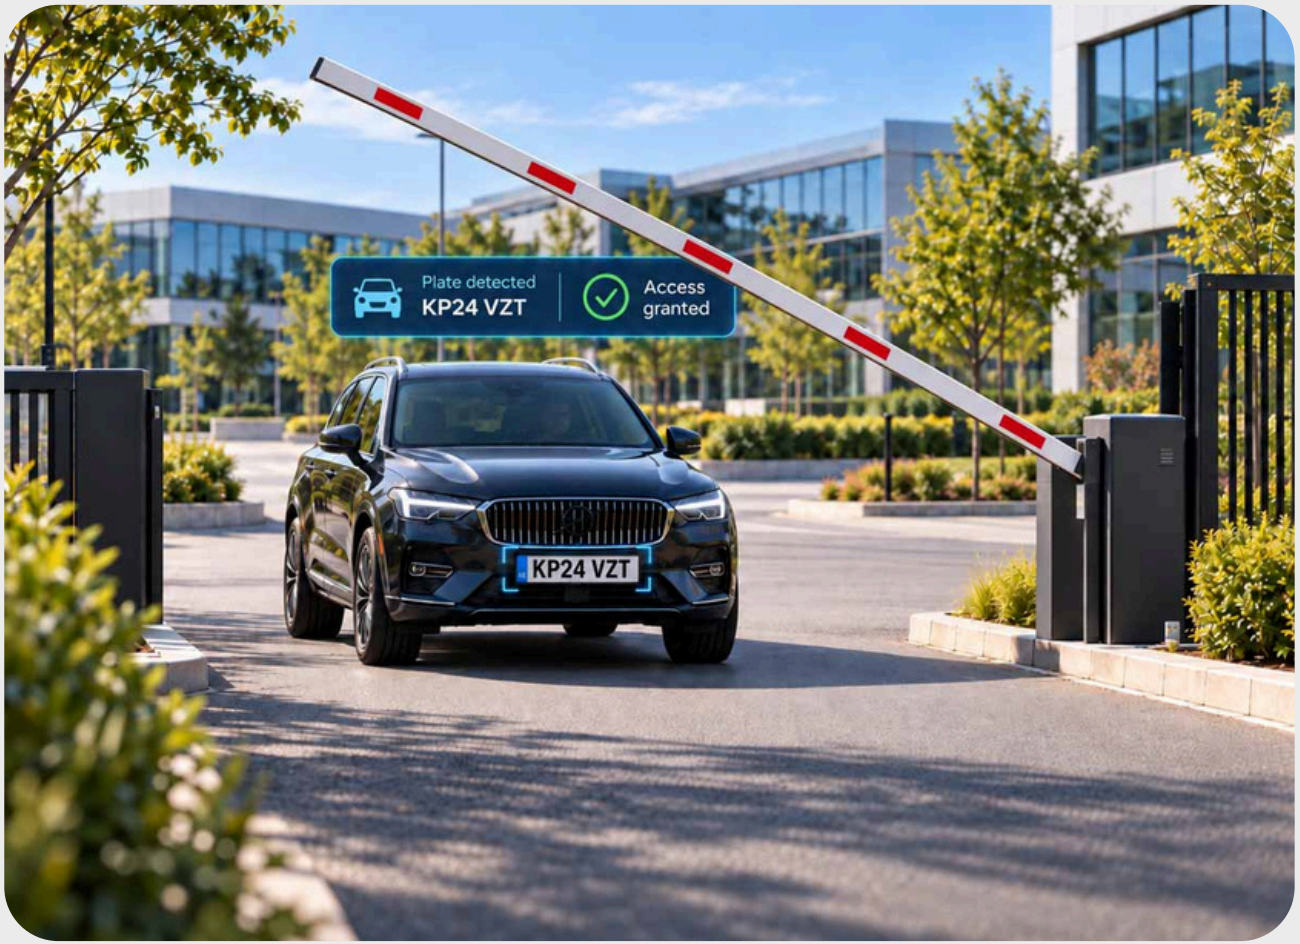

Common ANPR questions

Get answers for the most commonly asked questions regarding ANPR.

How does it work?

From plate scan to gate opening

Vehicle arrives

01 The ANPR camera reads the vehicle's number plate.

Access is checked

02 The plate is matched instantly against your approved list.

Gate opens

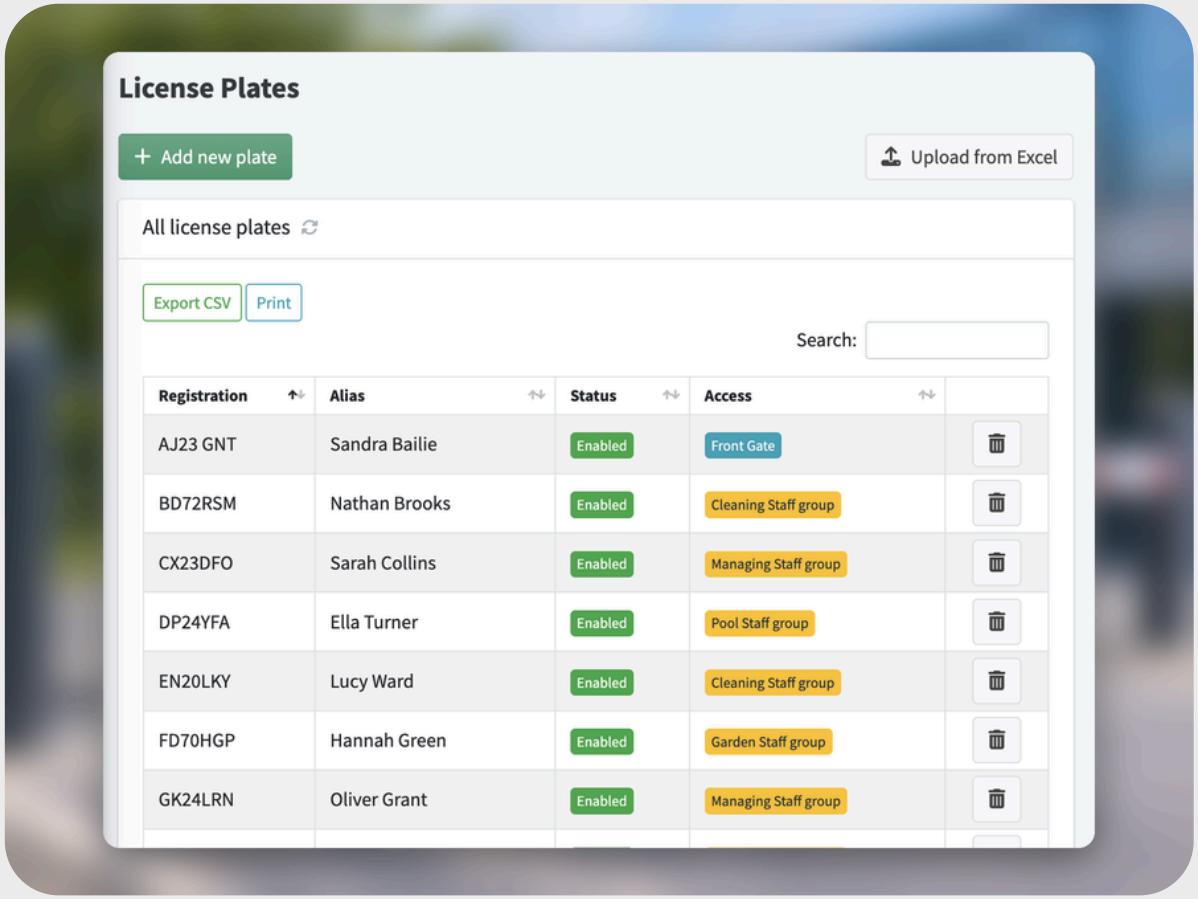

03 If authorised, the gate or barrier opens automatically.

Access is logged

04 A photo and video clip is stored against the access record.

Adding number plates

Easily manage via web browser from anywhere

01 All in one place

Login to the portal and manage all number plates, even if you have multiple cameras on site.

02 Bulk upload

Use a spreadsheet to add all number plates in one go.

03 No limitations

Add as many number plates as you need to the system.

04 Easily disable or delete

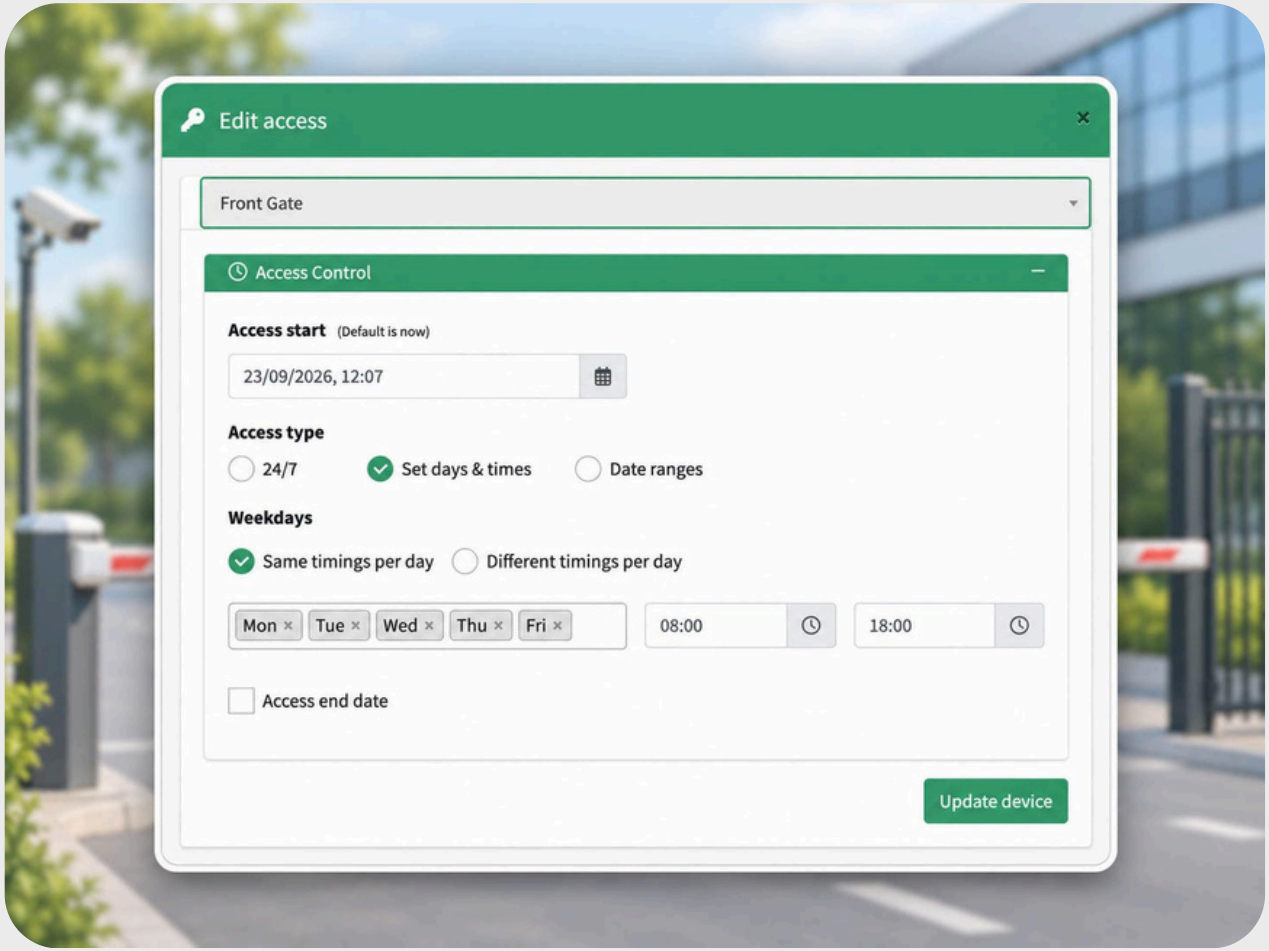

Disabling or deleting a number plate is as simple as one click of a button.

05 Changes apply instantly

No waiting for systems to sync, all access changes are immediate.

Applying access restrictions

Set who can access and when

01 Individual or grouped

Apply restrictions to a number plate by itself or group plates together for easy bulk management.

02 24/7 access

Access all the time with no restrictions.

03 Recurring weekdays

Days of the week, within set times.

04 One-off dates

A date with a start and end time for visitors on a single day.

05 Start & end date/time

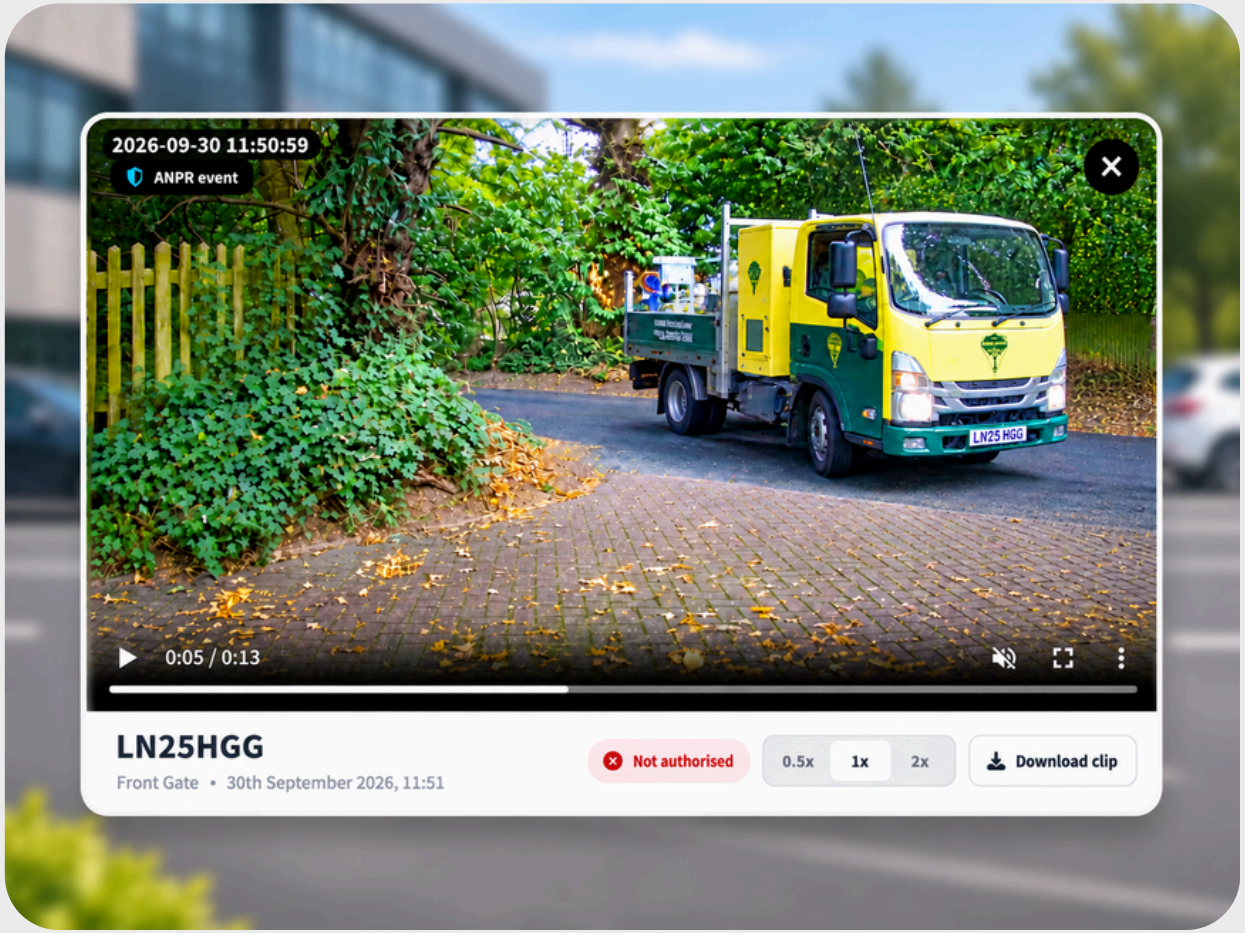

Two dates, a start and end, spanning multiple days.

06 Usage credits

Single use visitors where opening the gate uses a credit. Add more credits whenever required.

Access event recording

Photo and video proof of every event

01 **Photo & video clip**

View a recorded image and video clip of all access attempts, whether successful or not.

02 **30 day access log**

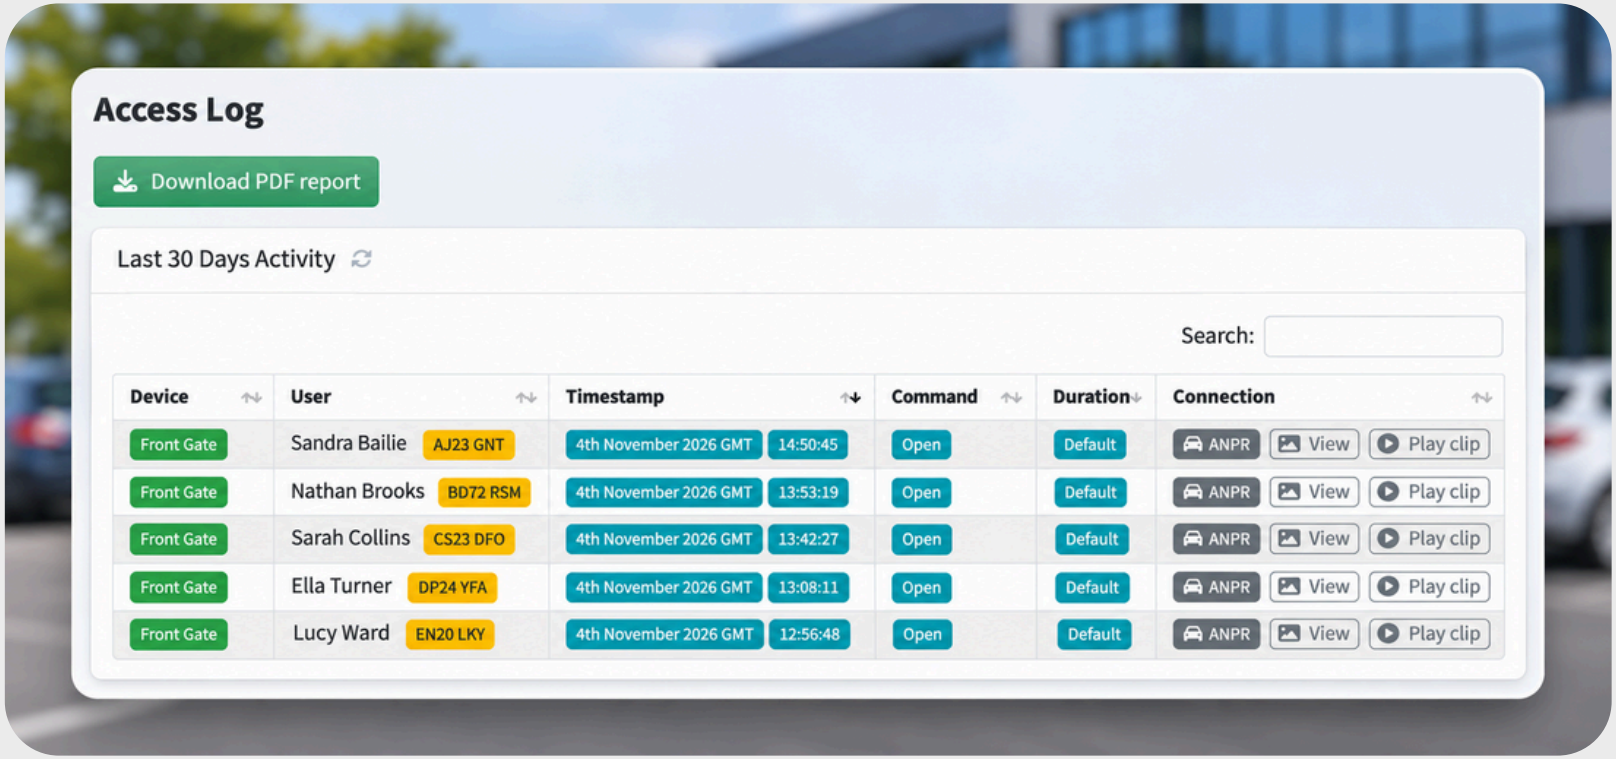

View access events up to 30 days ago. Extend up to 120 days if required.

03 **Easily export**

Save images and video clips for auditing and dispute resolution.

Access event logging

Successful and rejected entries all logged

01 **Full details logged**

Username, number plate, gate controlled, timestamp, success / rejected reason

02 **30 day access log**

View access events up to 30 days ago. Extend up to 120 days if required.

03 **Exportable**

Download as PDF or CSV for auditing, reporting and dispute resolving.

Entry and exit supported

Convenient entry and exit of your site, all recorded

Multi-Camera Support

01 Connect entry and exit cameras to a single system for complete coverage. Add more cameras for difficult site entrance angles.

Unified Management

02 All cameras linked to the same digiGate management console. Choose which camera controls each gate.

Booking System API

Automatic number plate management

The REST API provides

01 User and access management.
Updates when bookings change.
Total oversight from within the management console login.

What you can build

02 Booking system integrations.
CRM and third-party platform connections.
Automated workflows and triggers.
Custom apps & dashboards.

Built to scale

03 Works for single sites or multi-location deployments.
Ideal for high-turnover environments.
Improved security with less admin.

Common ANPR Questions

What happens when the Internet goes down?

Camera operation and gate opening continues as normal. Images are still taken as well as video clips as everything runs over the local network on site. Remote management will return when the Internet comes back again.

Can I use ANPR with my existing electric gate?

Yes. digiGate is designed to work with existing electric gates, barriers and access control equipment, so the existing gate automation does not need to be replaced.

How quickly does ANPR open the gate?

ANPR is designed so plate detection is quick enough that the vehicle doesn’t have to stop.

Can someone clone my number plate?

ANPR offers convenient, automated access with a detailed audit trail to help investigate suspicious activity and provide accountability.
While number plate cloning is technically possible, this is a consideration with all ANPR systems.

Does ANPR work at night?

Yes. ANPR works at night by using the built in infrared illumination. Images and video clips are all still collected at night also.

Does ANPR work in bad weather?

Yes. The ANPR camera is designed to operate in typical outdoor conditions, including rain and low light.

What happens if a number plate isn't recognised?

If a number plate cannot be recognised because it is damaged or missing, an alternative access method such as the digiGate mobile app can be used to open the gate.

What do I need?

The ANPR camera and processor, digiGate Pro hub and receiver, suitable local networking and power.
